A message from

Paul Hayes

Managing Director | Roberts Designs International

Proudly supporting the Australian flooring and construction industry.

When I look through this catalogue, I see more than just products. I see the relationships, hard work and trust that have helped build Roberts Designs International into the business it is today.

Roberts Designs International has always been proudly Australian-owned and family-run, celebrating its 30th Birthday in 2026. From the beginning, our focus has been simple: Support the Australian flooring and construction industry with best in class products, service and foster long-term relationships that matter.

Over the years, we've been fortunate to work closely with flooring products retailers, tilers, builders and caulkers across the country. Those relationships have shaped the way we do business. We understand our customers need products they can rely on, support when they need it and a partner who understands the pace and pressure of the trade.

This catalogue represents our most complete product range yet, across six categories and over 1200 items! It brings together a broad selection of products designed to support flooring installers and trade centres. Whether being used as an in-store sales tool or an on site reference guide, we built this catalogue to be practical, clear and useful.

Our range continues to grow across the products our customers depend on, supported by national distribution and a strong commitment to service. Alongside Roberts Designs International, we are also proud to represent a portfolio of globally trusted brands, Maxisil, Guardia, Siri, Baron and Sigma. Each brand playing a role ensuring we offer complete solutions to the flooring and construction industry.

While we are proud of where we have come from, our focus is on where we are heading. The industry continues to change, and we know our customers need suppliers who can keep pace, adapt and continue providing value. For us, that means continually reviewing our products ensuring they save our customers time and money, and remain a reliable trade partner to flooring and construction businesses across Australia.

I also want to take this opportunity to be grateful.

Thank you to our customers and retail / trade partners for your continued support and trust who choose our products every day. Thank you to our suppliers and brand partners who help us bring quality products to the Australian market. And thank you to our team, who work hard behind the scenes every day to support our customers, and keep the business moving.

As a family business, we do not take that support for granted. Every order, phone call, product recommendation and demonstration matters to us.

I trust this catalogue gives you a clear and useful view of what Roberts Designs International has to offer and where we are heading. We are proud to support the Australian flooring and construction industry and excited to continue to work alongside you.

Paul Hayes | Managing Director

OUR BRANDS

Roberts Designs International brings together a trusted range of brands built to support tilers, flooring professionals, trade stores and construction projects across Australia. From everyday installation essentials through to specialist sealants, tile cutters, surface protection and professional tools, our brand portfolio gives the trade access to high quality and premium products that are made for real Aussie jobsite use.

A premium silicone and sealant system trusted by professionals for wet areas, natural stone, pools and finishing work.

TRADE GRADE

Reliable, hardworking products made for everyday site use, offering practical performance and dependable value.

Surface protection solutions designed to help keep finished floors and surfaces protected during construction, renovation and fit-out.

Precision tile cutters and professional tiling tools built for accuracy, durability and consistent performance on site.

Professional grouting and tiling accessories designed to help tilers work faster, cleaner and with greater consistency on site.

Tough mixing and handling equipment made to support demanding workloads across tiling, flooring and construction applications.

SIGMA SIMPLE BEVEL

Precision chamfers for Porcelain, Marble or Granite.

Slides on edge of the tile, ensures uniformity of the bevel along the entire length of the edge worked.

Bevel up to 12 mm (to 6mm on porcelain tile)

Adjustable angle 22° to 90°

Allows finishing of the edge of the tile (max.30mm).

It can work dry with the fitting for dust extraction or wet with the Water Kit

Fits grinders 700 - 1400W. M14 Thread. Disc capacity max. 125mm (grinders not included).

- > Tile Thickness: 5 to 20mm
- > Includes: 50 grit Diamond grinding pad and velcro backed holder

TRIM FINISHES

Our trim and edging profiles are available in a wide range of finishes to suit every style of tile, space and design outcome. From clean whites and classic silvers through to warm metallics, deep charcoals, matte blacks and premium brushed finishes, the Roberts Designs trim range gives installers and designers the flexibility to match, contrast or highlight tiled edges with confidence.

COLD WEATHER TILING

Protect your adhesive cure, grout finish and aluminium trims

DID YOU KNOW?

Changes in temperature and humidity greatly effects the cure time of Glue and Grout?

WHAT ARE THE EFFECTS?

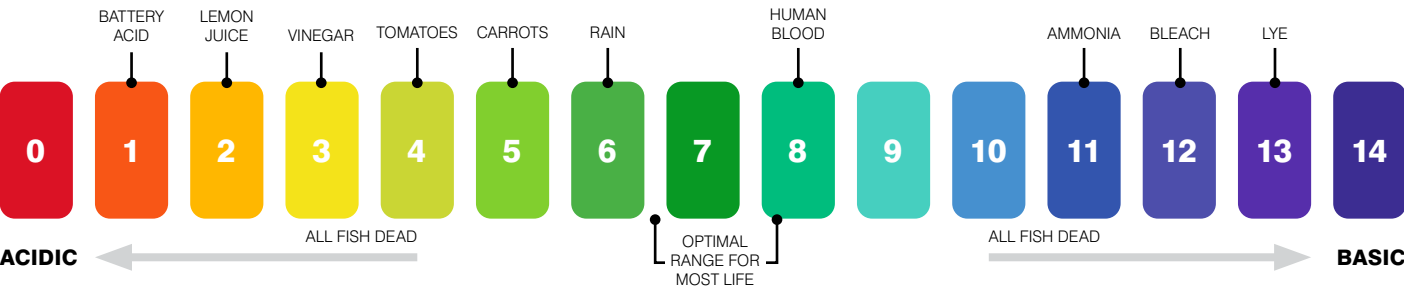

- 1. Tile movement
- 2. Aluminium trim corrosion, allergic reactions and dermatitis.

WHY DOES THIS HAPPEN?

- 1. At both lower temperatures and higher humidity's, cure time slows down, slower again when excessive water is applied, for example: sloppy or wet mixtures to level out or "mud up" to meet heights etc.
- 2. Most glues and grouts are cementitious and alkaline in nature (they have a high pH value).

Here's the facts, drinking water pH = 7, for every 1 pH increase, example: pH = 8, alkalinity increases 10x

HERE'S A PH CHART FOR YOUR REFERENCE

When mixed with water, pH of cementitious glues and grouts is over 13. Prolonged skin exposure to high alkalinity materials can lead to skin irritations, dryness and dermatitis. High alkalinity will attack and etch aluminium surfaces. Etching occurs whilst glue and grout are in a mixed uncured state. The longer they take to cure the longer they are able to attack the aluminium.

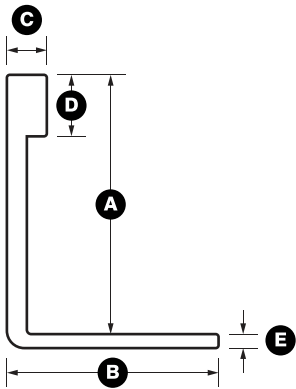

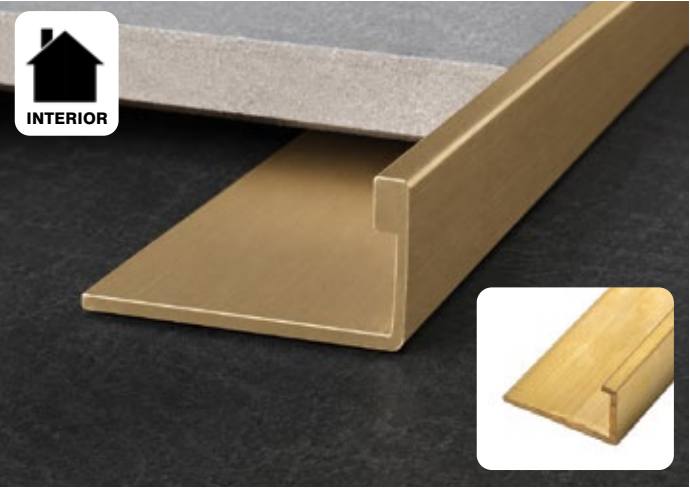

HOW CAN I AVOID THESE PROBLEMS?

- 1. Stick to the glue and grout manufacturers guidelines about water content, contained in technical data sheets.
- 2. Minimise the amount of glue and grout that contacts aluminium surfaces and clean up as soon as possible.
- 3. Change bucket water frequently, especially during grout clean up to prevent high PH water contacting the trim.
- 4. Wear appropriate personal protective equipment (PPE).
- 5. Use a quick set or accelerator material additive, such as Mapei Keraquick S1.

TOP TRADE TIP

Cold doesn't attack the trim - wet alkaline residue does.

Where To Use

Movement joints should be used in locations of stress concentration, changes in direction, close to fixed objects such as stairs, columns, lifts, doorways, driveways etc. Building designers should assess the magnitude of any stresses and decide where movement joints should be installed with respect to relevant factors and Australian standards.

Maintenance

1. Periodically clean the infill (rubber silicone). A buildup of dirt etc.can prove to be hazardous and affect the appearance of the profile.
2. Firstly, remove any loose debris on the profile with a vacuum or soft brush.
3. Clean the profile with warm water and light detergent only. Rinse the cloth constantly and remove any excess water.
4. It is recommended to avoid polishing and grinding unless necessary. Polishing and grinding reduce the anti-slip and effectiveness of the movement joint. Please note excessive grinding may remove silicone rubber infill, causing damage to substrate.

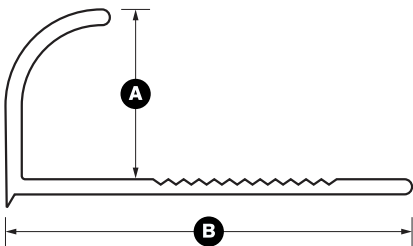

Note:

- > Available in Brass and Stainless Steel on request
- > Custom colours and sizes are available on request
- > Need a specific joint colour? Choose from the extensive Maxisil Naural Stone Silicone range.

CATALOGUE DISCLAIMER

All information in the Roberts Designs International Trade Catalogue 2027 Edition is provided in good faith and is believed to be accurate at the time of printing. Product images, diagrams and application examples are for illustrative purposes only and may not show the exact product, colour, finish, texture, size, packaging or installation outcome.

While care has been taken to represent products as accurately as possible, colours, finishes and surface textures may vary due to photography, lighting, print reproduction, digital screens, manufacturing tolerances and batch variation.

Roberts Designs International reserves the right to update, change, substitute or discontinue products, specifications, packaging, availability and technical details without notice. Customers should confirm all product details with Roberts Designs International before ordering, specifying or installing.

Any product-use, technical or installation information included in this catalogue is intended as general guidance only. It should not replace relevant Australian standards, product-specific instructions, site-specific assessment or professional trade judgement.
